

And please amend the abstract on page 22 as follows:

ABSTRACT

~~There is provided a~~ A jaw crusher ~~capable of~~  
~~providing~~ is provided that includes a toggle plate holder  
mechanism, provided without increasing the overall height  
thereof, and a reaction force receiver link mechanism of  
an up-thrust type. A tension link mechanism (70) acts as  
the toggle plate holder mechanism and includes a link  
having a tension link (71), a tension lever (72),  
a tension rod (73), and a tension spring (74).  
~~Therefore, the~~ The layout angle of the tension link (71)  
and tension rod (73) can be changed freely by the tension  
lever (72). ~~The freedom of layout in the height~~  
~~direction can thus be improved. As a result, without~~  
~~increasing the overall height, the toggle plate holder~~  
~~mechanism can be provided for the jaw crusher 30 having~~  
~~a reaction force receiver link mechanism 60 of an up-~~  
~~thrust type.~~
